

OUTSIDE AIR INTEGRATION

ADVANCED LEVEL VRV DESIGN WORKSHOP
(Length: 1 Day)

WHAT

A “hands-on” design course providing insight to the various methods of ventilation and their integration with VRV equipment

- » Overview of Daikin’s ventilation products
- » The application, integration & control of each product
- » Optimized design and selection of DVS DOAS
- » Utilization of Daikin’s selection software (Daikin Tools & WEBXpress)

HOW

The course is structured into four main parts:

- » **Training:** Presentation covering the most common ventilation methods used with VRV equipment
- » **Design:** Participants design a project based on a given scenario
- » **Presentation:** Participants demonstrate their project design
- » **Solution and Summary:** Trainer provides optimized solution(s) and summarizes learning

WHO

The target audience includes Daikin **manufacturer representatives**, their associated **consulting engineers** and those **involved in the project design process** (Ability to use & access WEBXpress is required)

WHEN AND WHERE

The course is provided locally by Daikin Application Engineers, upon request. Consult your Daikin representative for availability or contact our team direct at: applications.engineering@daikincomfort.com

Daikin, VRV, and its design are trademarks owned by Daikin.
