

WATER COOLED VRV

ADVANCED LEVEL DESIGN WORKSHOP
(Length: 1 Day)

WHAT

A full day course providing hands on design and application training for water cooled VRV systems

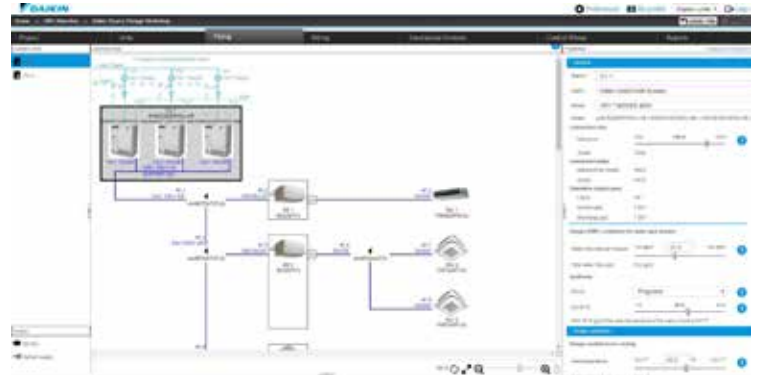

- » An overview of the general components, layout, and operating modes of a water cooled VRV system
- » Application of Daikin water cooled VRV systems, features, and abilities
- » Selection and optimization of key system parameters including temperatures, flow rates, etc. for ideal system efficiency
- » Utilization of Daikin's VRV Selection Software (WEBXpress)

HOW

The course is structured into four main parts:

- » **Training:** Presentation covering all aspects of integrating a water loop and VRV system
- » **Design:** Participants design a project based on a given scenario
- » **Presentation:** Participants demonstrate their project design
- » **Solution and Summary:** Trainer provides optimized solution(s) and summarizes learning

WHO

The target audience includes Daikin **manufacturer representatives**, their associated **consulting engineers** and those **involved in the project design process** (Ability to use and access WEBXpress is required)

WHEN AND WHERE

The course is provided locally by Daikin Application Engineers, upon request. Consult your Daikin representative for availability or contact our team direct at: applications.engineering@daikincomfort.com

Daikin, VRV, and its design are trademarks owned by Daikin.
